DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 18-25, drawn to the isolated polypeptide comprising the amino acid sequence of SEQ ID NO: 2, or encoded by the nucleic acid sequence of SEQ ID NO: 1, classified in class 530, subclass 300.
- II. Claims 18-25, drawn to the isolated polypeptide comprising the amino acid sequence of SEQ ID NO: 4, or encoded by the nucleic acid sequence of SEQ ID NO: 3, classified in class 530, subclass 300.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different functions, and are not disclosed as capable of being used together. Specifically, the inventions of Group I and Group II are distinct amino acid sequences, each with an independent structure-function relationship that is predicated on the distinct amino acid sequence. Because each Group claims a protein that has a distinct amino acid sequence, the Groups have different functions and are considered distinct patentable subject matter.

Pursuant to 35 U.S.C. 121 and 37 C.F.R. 1.141, the sequences listed in claims 18-25 are subject to restriction. The Commissioner has partially waived the requirements of 37 C.F.R. 1.141 and will permit a reasonable number of such amino acid sequences to be

Art Unit: 1636

claimed in a single application. Under this policy, a single independent and distinct sequence will be examined in a single application. Furthermore, a search of more than one (1) of the sequences claimed presents an undue burden on the Patent and Trademark Office due to the complex nature of the search and corresponding examination of more than one (1) of the claimed sequences. In view of the foregoing, one (1) sequence is considered to be a reasonable number of sequences for examination.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, especially in instances where the classifications are the same, the non-patent literature searches required for each of these inventions are not co-extensive, hence said searches would be burdensome. Therefore restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1636

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
